

CyberComm Marketing, LLC was founded in May, 1999, with one online directory that offered an internet presence to businesses in Starkville, Mississippi. We now have over 600 generic, descriptive internet addresses that inform people exactly what service is offered by your business. If you fix it, rent it, make it, ship it, clean it, install it, or remove it, we probably have an online directory that can help your business get found on the net. Using addresses like WeBoardDogs.com, WeFixWindshields.com, and even WeRentPonies.com, your business can have a very affordable internet program with a web address that lets people know exactly what you do for a living. We offer an internet marketing program that has proven to help our clients businesses grow by increasing their client base. Ten years later, CyberComm currently has clients representing 47 states in the US, as well as Canada, Australia, and New Zealand.

Thanks for your interest, and if you have any questions please feel free to give us a call.

Sincerely,
Denis Everett
President
CyberComm Marketing, LLC

How Our Internet Marketing Program Works

We keep it simple! Having a phone number that spells a business' name has long been a recognized marketing tool that works. CyberComm Marketing has acquired the internet addresses that act just like those old, easy to remember phone numbers. Our internet addresses describe your business so well people can remember it easily. What's a better internet address than WeFixWindshields.com if that's what you do for a living. That's about as simple as it gets.

We specialize in vertical online directories, meaning that our websites specialize on one individual industry instead of a particular geographic area. The entire website can focus on keywords that are unique to that particular business, thus helping in search engine placement, but mainly defining the audience coming to the website. Please remember that when someone finds the online directory WeFixFoundations.com they must have entered search words pertaining to that industry, or followed the path from one of our other related websites. They didn't get there by mistake. If they end up at a website called WeFixFoundations.com, they must be needing that service. Another advantage with our vertical online directories is that many businesses may be listed on WeFixFoundations.com, except they are in different cities, or market areas. With people in different areas looking for services areas whether it's Austin or Boston it's creating more hits and traffic, which helps each business listed.

We don't allow competitors. This may be where CyberComm is most unique. Other directories will list every business in town if possible, but we want to be YOUR internet marketing partner. Your competition down the street will have to find someone else to help them. A lot of our customers don't have another website other than ours, but if you have one we will link to it. The bottom line is this, if your city is available today, it may not be tomorrow. So you can "LOCK OUT THE COMPETITION", if you'll call us today.

(Don't confuse Google Ads for business listings. If a city is not taken Google ads are placed on that page until it is reserved by a business, then they are removed) If your city isn't listed that just means and we can add it. Also, we also may have other website names that you would rather have. We have over 800 from which to choose.

Some examples include

WeSellWater.com, WeSellBottledWater.com or WeDeliverWater.com
WeFixLeather.com or IFixLeather.com or WeFixUpholstery.com
WeRentSportsCars.com or WeRentExoticCars.com
WeRentPonies.com or WeRentPartyPonies.com
WeCleanAir.com or WeFilterAir.com

Our Directories are Networked. Our websites feed each other, creating a synergy that creates much more traffic than a single site could that stands by itself. Have you ever wondered why restaurants and automobile dealerships often congregate on the same street? Because it's proven the combined traffic is much greater for the total group than if they're all sitting alone in a separate location. We apply this same principle to your business using the Internet. This creates more hits to your individual website because of our network, creating reciprocal links that enhance search engine placement. For instance, when someone goes to WeFixWindshields.com, they also find links to other related automotive services like WeFixBumpers.com, WeDetailCars.com, WeFixDings.com, WeDoBodyWork.com, WeInspectCars.com, WeTintWindows.com, WeFixUpholstery.com, WeFixHeadlights.com, WeFixScratches.com, WeFixLeather.com, WeFixWheels.com, WeSellEngines.com, WeFixTransmissions.com, InsureItWithUs.com, & WeDoAutoRepair.com. The same goes for any of these websites listed above, and they lead to hundreds of other websites in only 2 clicks, separated by types of businesses, like [rentals](#), [repairs](#), [residential](#), [cleaning](#), [personal services](#), and [weddings](#).

In addition to our networked directories, we also have our clients listed in two additional locations on our corporate website CyberCommMarketing.com. One section lists all our clients according to [state and city](#). When someone visits a city's webpage, all our customers in that city are listed together, regardless of the directory. Another website location has all our clients listed [according to industry](#). All the foundation repair businesses are listed together, all windshield repair companies are together, etc. These two areas where CyberComm clients are listed do not use the "exclusive one business per city policy" like our individual directories, but these listings can be found on top of the search engines much of the time and greatly increases the exposure for your business.

If you have a website, we will link to it from our directories. Reciprocal links are one of the factors that will help with your placement on search engines. We do request that you place a link back to our directory from your current website if we link to yours. Our program has several places on the Internet where your business will be listed. Think about it this way. If McDonald's thought that being in only one location was the best way to get the most exposure and make the most money, they would still have just one store. Likewise, the more places you can be found on the internet makes it probable that more people will have the opportunity to find you.

If you don't have a website, we have an inexpensive solution that has proven to be effective. A web address and an email address that lets people know exactly what you do for a living. That makes it very easy to find your information and also adds a level of professionalism to your business. There's a reason that most businesses' have a web site. It's because anybody can access it, and you can integrate it into other media you use to reach the public. This capability makes it the most effective marketing tool you have. Let us help you get started today. Whether you already have a web site or not, you can have CyberComm's Internet marketing expertise and their extensive network working for you.

What we really do is help people find you when they are looking for certain services. Whether it's [WeFixBicycles](#), [WeRentRVs.com](#), or [WeCleanHouses.com](#), **we only allow 1 business per city to be listed!** CyberComm's mission is to get your business found by that person looking for those services, and looking for them in a location you serve, and at the exact time they need them. This is marketing in its truest form. If somebody needs something you have or can provide, and in an area you serve, you'll probably have a good chance of at least talking to them before a decision is made? We know a decision is coming sooner or later, and they must be looking for bicycle repair in your city, or they wouldn't be on WeFixBicycles.com, would they? That's what we're trying to do. We're trying to help you get a shot at their business. In today's marketplace the consumer is more informed and more educated than ever before, requiring businesses' to raise themselves to a higher standard when it comes to quality and service. The common thread is the Internet. Not only has it educated consumers but it has given them the power and capability to thin out those businesses that don't meet with those high standards.

What's an average customer worth to your business? We can help you utilize the Internet in an effective manner and it won't bust your budget. We all know that the best advertising is "word of mouth". We also know that repeat customers are the best way to build a business, but in order for that to happen they have to find you the first time! It's a fact that most people look for information on the Internet about products and services before they make a buying decision. If they can't find your website or information, your business MAY NEVER even be in the buying decision. It's simple. People can't learn about your business if the information needed isn't there or too hard to find. This is a problem many businesses' have had in the past and can solve by letting us work for you. A lot of businesses have websites, but it doesn't do any good if people can't find it when they are looking for the services you can provide in your local area. We work hard to get our directories found so people can find information about your business and a link to your website.

We provide an affordable alternative for businesses to establish an internet presence and help businesses that have already done so use it more effectively. We offer an internet marketing program that involves basic marketing fundamentals, internet advertising and search engine marketing. If this program works you can stay on it. If you don't think we're worth it, get off. But at least you have the option. There are more than a few businesses out there that wish they had found us before their competition did, but because somebody beat 'em to it, they can't get on board. The best thing about our program is the risk involved. The cost shouldn't prohibit you from giving us a chance to see if we can help your business.

What's With The Zebra?

In today's challenging marketplace it's hard to determine how to set yourself apart from the competition. That's why we love the zebra. He reminds us that you can be painted black & white; the two most contrasting colors in the universe, and still get lost in the herd if you're doing what everybody else is doing! That's good if you're trying to avoid being eaten, but in the business world if you're doing the same thing as everybody else, that's exactly what can happen.

We feel CyberComm's unique concept makes us stand out from the crowd.

NOBODY can offer the Internet addresses such as WeFixWindshields.com, WeFixFoundations.com, or even WeRentPonies.com except CyberComm.

NOBODY can offer you an e-mail address like Joe@WeRentTuxes.com, or John@WeFixTVs.com except CyberComm.

And furthermore, NOBODY can give you the license to use those web addresses in your area on an exclusive basis except CyberComm Marketing, LLC.

{We want to note that we own over 800 domain names so we probably have one that matches what you do.}

We make it very easy to do business with us. We take credit cards, debit cards, and can accept checks electronically. There are no contracts. You can pay by the month and cancel anytime. Go to [our testimonial page](#) and see what our customers say. Don't believe us. Believe people that have tried us.
